

Care and Maintenance Guide

Bathroom Taps and Shower Valves

Guarantee

Brassware ranges operate at both high and low pressure up to a maximum of 6 BAR and carry a 10 year guarantee on brassware and a five year guarantee on cartridges against manufacturer defects.

Cleaning Dos

- Cleaning regularly with hot soapy water and a soft cloth is much easier and more preferable to the finish than infrequent 'heavy' cleaning
- Use soft or micro fibre cloths (eg. E-cloth)
- Always rinse the item with water after cleaning before wiping dry

Cleaning Don'ts

All the items below are known to have a damaging effect on taps and showering products. To ensure your product lasts beyond its warranty period you should avoid using products including:

- Spray cleaners, irrespective of the label claims. (Take care if using a spray cleaner near the taps, often they can be exposed to the cleaner by accident.)

- Any propriety limescale cleaner
- Bleach - diluted or neat
- Abrasive cloths and creams
- Soaps with antibacterial content
- DIY-related products and chemicals
- Oven cleaners
- Toothpaste
- Mouthwash and denture cleaners
- Toilet cleaner
- Steel wool pads
- Silver dip cleaners
- Solvents (including chlorinated solvents)
- Powder based household cleansers
- Metal polish
- Rust removers
- Drain cleaners
- Acetones

In addition to the above products, avoid leaving any wet cloths or sponges on the surface of the brassware for prolonged periods.
